

A CUSTOMER TO HER BANK ADVISOR

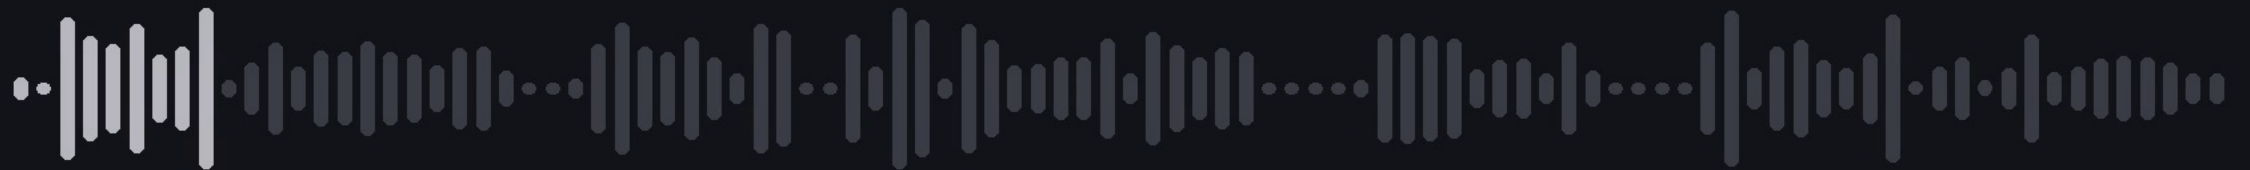

«*Die sind no  
nöd publiziert.*»

“They haven't been published yet.” The call is recorded. Most likely, no one will ever listen to it.

AUFZEICHNUNG · KUNDIN AM TELEFON MIT IHRER BANK

*Mini Schwöschter schafftet det i de Finanzabteilig.*

## THE PROBLEM TODAY

*Now what? Today, nothing happens.*

**Every**

call between customers and advisors is recorded.

**Few**

are reviewed. Key staff only listen to samples.

**Daily**

thousands of new call minutes come in.

So fraud such as insider trading mostly goes undetected, on both ends of the line.

## WHY KEYWORDS ARE NOT ENOUGH

# *Same sentence. Two verdicts.*

*«Ich läse Ihne die sechs Stelle us dem Feld vor: acht, drü, sechs, eins, sibe, vier.»*  
*“I’ll read you the six digits from the field: eight, three, six, one, seven, four.”*

Call A, a moment earlier

“I’m looking at the expired sample in the guide;  
the real login window is closed.”

**No alert**

Expired sample from the guide

Call B, a moment earlier

“I just started the login myself. The real window  
says the value is valid.”

**Alert**

Valid code of the real login

## YOUR TASK

**Build a system that automatically checks every phone call in Swiss German, raises a reasoned alert and knows when it is unsure.**

---

### **1 Keyword approach**

How do you define what the system listens for?

---

### **2 Tuning**

How do you set when it raises an alert?

---

### **3 Your idea**

Creative and new, yet efficient enough for every call.

## WHAT YOU GET FROM US

# *You don't start from zero.*

### **60 calls**

In Swiss German, about 4 hours 40 minutes, all synthetically generated.

### **Transcripts and answers**

For every call: the dialogue as text and the expected verdict with its reasoning.

### **Models and GPU**

You get GPUs for the weekend. Anything that can be self-hosted is allowed.

### **Us on site**

Outcept is with you all weekend. Inventx is reachable for domain questions.

Optional: an Outcept API that your solution reports its hits to.

WHO IS BEHIND THE CASE

**IT and digitalisation partner for Swiss banks  
and insurers.**

---

**2010**

founded, independent  
and owner-managed

---

**500+**

employees

---

**Chur**

headquarters, plus St. Gallen, Bern  
and Zurich

WHAT'S IN IT FOR YOU

# *Not a toy case.*

## **Real problem**

From the daily business of Swiss banks, brought in by Inventx.

## **It continues**

After the sprint, the case turns into an MVP for Inventx.

For the winning team of the case: goodies from Inventx, Raspberry Pi from Outcept.
